

### Environmental and Sustainability Policy

Chambers Southern offer a variety of services from Installation of Lighting Equipment to cable fault location. Specialising in street lighting, we are also able to offer a complete range of electrical works including commercial and industrial installation, inspection and test facilities, maintenance of electrical plant. With NHSS scheme certification, Highway electrical works is an area of specialism.

We are committed to the protection of the environment and being a sustainable business by applying the three pillars of sustainability (Environment, Community and Economic).

Wherever our operations are undertaken we consider project, customer and stakeholder requirements. We seek to provide and maintain a place of work that offers minimal risk of adverse environmental effects and manages project waste in line with the waste hierarchy and duty of care requirements. We are focused on continual improvement of our performance.

Environmental requirements have been integrated into everyday activities supporting a sustainable approach to work and are incorporated within our management system documents. This approach supports our commitment to continual improvement and prevention of pollution and the requirements of NHSS18 for The Natural Environment and Landscape Including Ecology.

Our sustainability objectives are focused on:

- Demonstrating compliance with legal and other relevant requirements applicable to our business and our services.
- Implementation of measures to minimize the impact of our operations on the environment by conserving resources and reducing wastage (applying the waste hierarchy i.e. Eliminate, Reduce, Reuse, Recycle).
- Encouraging employees at all levels to consider environmental issues when tendering, purchasing and undertaking site activities.
- Using a local supply chain and working in partnership with them to ensure responsible social and environmental practices.
- Work with our clients to identify energy saving solutions.

The principal aim of these objectives is to minimise the environmental significance of our activities, help our customers reduce their carbon footprint and grow our business in a sustainable way.
